

PRESS RELEASE

Tech Tour Honours the Top 45 Digital Health and Medtech Companies in Europe and Announces Winners of the 2016 Healthtech Award

Wearable insulin delivery device and immersive virtual reality platform for neuro-rehabilitation scoop prizes at the 2016 Tech Tour Healthtech Summit

Geneva, June 21, 2016 – Wearable insulin delivery, diagnostic tools for allergy profiling, blood plasma profiling for cancer diagnosis, and real-time health and fitness tracking are among the projects honoured at the 2016 Tech Tour Healthtech Summit today and chosen to present to a group of leading investors, VCs, corporate partners, and business angels in Lausanne, Switzerland.

This year's top European Digital Health and Medtech companies were chosen from a record-breaking number of applications to compete for a position in the top 45. They represent companies from 15 European countries, in various stages of development ranging from seed to expansion, and engaged in sectors including medical devices, genomics, cell therapy, wearable devices, cardiology, diagnostics and monitoring, patient safety, biotechnology, and nanotechnology. The 2016 edition received 69% more applications from Digital Health companies compared to the previous year, and a 9% decrease in applications from Medtech companies showcasing an upward trend in representation of digital tech in Europe.

Top 25 Digital Health Companies

Corwave	OncoMark
EBERS Medical Technology	Orbix Medical
Fineheart	Photonics Healthcare
GALGO Medical	Tech2ART
GATT Technologies	Tide Microfluidics
Implandata Ophtalmic Product	Vimecon

The Tech Tour **2016 Medtech Award** goes to CeQur for their outstanding contribution to improving the lives of patients with type-2 diabetes. Their wearable device is the world's first to deliver insulin on a 3-day basis, preventing the need for multiple daily insulin injections.

The Tech Tour **2016 Digital Health Award** goes to MindMaze, who has developed a platform to enable patients to use immersive virtual reality for neuro-rehabilitation for treating stroke, brain-injury, amputee patients, as well as a wide spectrum of neurological deficits to accelerate recovery.

CeQur and MindMaze have both presented at past Tech Tour Healthtech Summits, and the Healthtech Awards are presented to past participants who have since gone on to make a significant contribution to global health.

Doug Lawrence, CEO of CeQur had this to say about their achievement: *“We have previously participated in the Tech Tour and benefitted greatly from interactions with other start-ups and investors. Currently we are preparing to bring a much needed new product to the market next year and are looking forward to helping improve the lives of people with type 2 diabetes. It is extremely encouraging to be receiving the Tech Tour Medtech Award 2016, we appreciate the recognition and are honoured that we were chosen.”*

Tej Tadi, Founder and CEO of MindMaze had this to say about winning the Digital Health Award: *“It's a great honour to be recognized for the Digital Health Award, especially coming from a network of business leaders and peers who have brought consistent value to the ecosystem of devices at the intersection of healthcare and medicine. We take pride in being considered amongst companies that have proven themselves to change lives.”*

The Tech Tour Healthtech Summit is Europe's leading forum for discovering the companies engaged in cutting edge technological advances in digital health and medical technology, recognising and celebrating the inspirational work that these enterprising start-up and growth companies are doing to bring the therapeutic potential of healthtech closer to clinical reality.

Over 200 investors, entrepreneurs and leading health figures will gather in Lausanne to recognise and celebrate excellence in healthtech across Europe, covering several key areas including patient engagement, virtual care, health IT, devices and sensors, digital diagnostics, digital therapeutics, data and analytics, and clinical trial management.

The Summit, held in association with Canton de Vaud and InvestHorizon, takes place at the IMD Business School.

Roberto Ascione, CEO of Healthware International led the 2016 edition and said that *“the 2016 Healthtech Summit will be the largest edition to-date when looking at the number of companies that applied, the maturity of their products, and the many VCs attending. Digital Health's offerings at this year's summit have grown significantly alongside Medtech's own, and the business opportunities that they collectively provide will be evidenced by the insightful discussions surrounding access to funding and partnership opportunities here in Europe.”*

About Tech Tour

Tech Tour was founded by VC Sven Lingjaerde (Endeavour Vision) in 1998, and acts as a platform to foster interactions through a range of pan-European regional & industry sector events. The scope of the events, the content and selection processes are driven by volunteer investors & IVC members.

The Healthtech Summit is the leading independent European platform for investment in Digital Health and Medtech since the 1st edition in 2008. Digital Health is part of the scope of the Healthtech Summit since 2014, and is quickly becoming the dominant component. The event is focused and interactive, with networking sessions, panel discussions, company presentations and ample opportunity to network, share insights and learn more about emerging trends. This offers entrepreneurs direct access to a unique ecosystem of investors, corporate partners as well as peers, to facilitate fundraising and partnerships. Investors and Corporate participants gain direct access to the most promising Digital Health and Medtech investment, acquisition & partnership opportunities. For more information, please visit www.techtour.com

About Canton de Vaud

The mission of the Department for Economic Affairs of the State of Vaud is to put in place the framework conditions required to promote economic growth. Its objectives are designed to highlight the know-how of companies and to make the canton an attractive and competitive environment.

The vitality of economy in the Canton of Vaud is particularly remarkable in state-of-the-art industries with high added value such as life sciences, information technology, micro- and nanotechnology, environmental and agri-food technologies. Strong political support and many concrete state support and incentives serve to reinforce growth in these sectors. For more information, please visit www.vaud.ch

About InvestHorizon

InvestHorizon is the Investment Readiness Programme designed to increase investments made in Innovative European SMEs through Investment Readiness development and Investor sensitization. Brought forward by 10 qualified and reliable partners, InvestHorizon offers a set of services and training across Europe, to investors and entrepreneurs, from start-up to mid-cap level. The programme is dedicated to maximising entrepreneurs' chances of successfully obtaining funding, through training and direct access to key European investors.
